Release notes

Last Updated: 2024-10-07

This section contains release-specific information for IBM Business Automation Manager Open Editions 8.0 fix releases.

Release notes for version 8.0.0 to 8.0.5 🔗

All information specific to the version 8.0.0 to 8.0.5 releases is included in this document:

Release notes for IBM Business Automation Manager Open Editions 8.0

Known limitations and issues are included in this document:

Known limitations and issues for IBM Business Automation Manager Open Editions 8.0

Release notes for version 8.0.6 🔗

This section contains information on the version 8.0.6 release, namely:

- New or changed functions
- Documentation updates
- Deprecated features
- Removed features
- Known limitations
- Fixed issues

What's New 🔗

BAMOE 8.0.6 fix release delivers critical customers defect fixes and important security updates. This section describes any support configurations, features, or functions that are changed in version 8.0.6. For the best results with BAMOE 8.0.6 fix release, follow the Software Product Compatibility Report (SPCR). SPCR lists the versions of software that support BAMOE 8.0.6.

Documentation updates 🔗

The following sections contain documentation corrections.

Location	Correction Description	Improvement
Chapter 23. Configuring a service and KIE Server to send Kafka messages when a transaction is committed	In the procedure to send Kafka messages when a transaction is committed, the reference to `7.67.2.Final-redhat-0007` is not valid.	`7.67.2.Final-redhat-0007` must be replaced with `7.67.2.Final-redhat-0017` as follows: `maven-repository/org/jbpm/ jbpm-event-emitters-kafka/7.67.2.Final-redhat-0017/jbpm-event-emitters-kafka-7.67.2.Final-redhat-0017.jar`
Chapter 26. Configuring KIE Server to send information to ElasticSearch when a transaction is committe	In the procedure to send information to ElasticSearch when a transaction is committed, the reference to `7.67.2.Final-redhat-0007` is not valid.	`7.67.2.Final-redhat-0007` must be replaced with `7.67.2.Final-redhat-0017`, as follows: `maven-repository/org/jbpm/ jbpm-event-emitters-kafka/7.67.2.Final-redhat-0017/jbpm-event-emitters-kafka-7.67.2.Final-redhat-0017.jar`
14.4. Creating users	When installing BAMOE 8.0, user data is now only stored in files rather than properties.	You can only create users using the file-based user script `jboss-cli.sh` and the procedure to change from using property based user storage is mandatory if you were previously using that method.

Location	Correction Description	Improvement
17.1. Creating data objects	In the procedure step 6, if the id does not follow Java Bean naming convention, the Jackson marshalling library will not be able to marshall it correctly.	When you create new data objects in the data object designer, the first character of the ID must be in lower case. If you want the name to start with an upper case character, you must add the `jaxb-api` dependency to the project and annotate the Data Object parameters with `@javax.xml.bind.annotation.XmlElement`. For example, `@org.kie.api.definition.type.Label(value = "IBMDataObject"); //data obj label @javax.xml.bind.annotation.XmlElement(name = "IBMDataObject"); //data obj id.`

Deprecated features 🔗

No feature are deprecated in version 8.0.6.

Removed features 🔗

This section lists the features that are removed in version 8.0.6.

Feature	Description	Action
Support for Red Hat build of Kogito	Following the deprecation announcement in the 8.0.5 release notes, support for the Red Hat build of Kogito is now removed from the IBM Business Automation Manager Open Editions release 8.0.6.	Contact IBM Support or your Tech Sales Representative for further assistance.[1]
Java 8 support	Java 8 support is removed in 8.0.6 due to limitations with ongoing security vulnerability resolution and support. BAMOE v8 security fixes continue to be provided to support Java 11.	Upgrade to Java 11 and use Java 11 compatible applications. Contact IBM Support or your Tech Sales Representative for further assistance.

Known limitations 🔗

This section describes known limitations in version 8.0.6.

Fixed issues 🔗

For information on issues that have been fixed inversion 8.0.6, see the [Fix list](#).

---

1. The Kogito image components are removed in version 8.0.6 and will no longer provide security updates beyond version 8.0.5. ↵
